# REVOLUTIONIZING HOME ENTERTAINMENT

Vanish Designs combines stunning interior design and state-of-the-art technology—superbly.

WRITTEN BY SHEHLA LUCANERA

**I**n the ever-evolving world of interior design, only a few innovators truly disrupt the status quo. One such company is Vanish Designs. Based in Westport, CT, Vanish integrates its high-end furniture with cutting-edge, name-brand technology, redefining home entertainment—with no basement required.

For too long, TVs have dominated our living spaces, dictating room layouts and clashing with interior design. Vanish offers a revolutionary alternative. Imagine a living room in which artwork, instead of a bulky TV, graces the wall. Picture a city apartment where your furniture faces stunning views, without an obtrusive screen in sight. With Vanish, these visions become reality. The company's systems deliver an immersive experience far beyond that of a traditional TV. When turned off, the technology disappears into elegant furniture, leaving nothing behind but beautiful decor.

Vanish's custom furniture combines exquisite craftsmanship with state-of-the-art audiovisual technology. Primarily credenzas, benches and console tables, these pieces are more than just furniture—they're designed to house top brands like Apple, LG, Samsung, Sonos and Epson. At first glance, they enhance any room's aesthetic, but with the touch of a button, they instantly transform a space into a stunning home cinema. A large screen, ranging from 85 to 130 inches, unfurls from within, illuminated by a hidden laser TV that projects sharp 4K images. When this is paired with a Sonos sound system, the result is a jaw-dropping cinematic experience. Vanish's furniture offers storage and seating while concealing today's most advanced audiovisual components, all of which are modular and easily upgraded as technology evolves, ensuring your home remains future-proof. Moreover, these systems require only a

single plug, making them easy to install and relocate. Tech leaders have embraced Vanish Design's systems, recognizing the company's blend of high-end design and technology. Says a top executive at Apple, "Vanish has created the Apple experience for home entertainment."

Vanish Designs has a to-the-trade program for interior designers, AV integrators and homebuilders, and it ships nationwide, making these exquisite systems accessible across the country. Of special note to those who spend a lot of time looking at computers and devices, Vanish's systems offer a viewing experience that is refreshingly easy on the eyes. Unlike traditional TVs, which emit harsh blue light, Vanish's screens reflect light, reducing eyestrain and offering a more comfortable, glare-free experi-

ence. Whether the user is watching sports, enjoying a movie, or gaming, the visuals are crisp, vivid and eye-friendly.

The technology used by Vanish must be seen to be believed. Few have witnessed it firsthand, and when they do, they are astounded. Fortunately, Vanish has showrooms in Westport and Manhattan, where clients can experience the magic themselves and find the perfect piece for their homes.

In a world where design and technology often collide, Vanish Designs offers the perfect synthesis of beauty and innovation. More than just a product, it's a revolution in home entertainment—one that is transforming how we live, design and experience our homes.
